

The Habitat Garden at Harvest for the Hungry Garden encourages you to join the national Homegrown National Park movement launched by Dr. Doug Tallamy, an entomologist, conservationist, and writer. Because critical insect, bird, and other species are losing essential habitat that makes possible all life on earth, *we invite you to create biodiverse habitat in your own yard.*

We've selected five beautiful plants native to Sonoma county that provide many struggling species with food, shelter, and conditions for survival. Adding one or more of these plants to your yard will make it easier for keystone species to find what they need and flourish. Stop by our table; it's just \$4 per organically grown native plant!

We're offering:

California grape, *Vitis californica* (includes some Rogers Red cultivars),
Edible, vine, sun
Limited number!
